

Appl. No. 10/026,208

Amtd. Dated May 27, 2005

Reply to Office Action of February 3, 2005

Attorney Docket No. 81846.0031

Customer No.: 26021

Amendments to the Specification:

Please replace the paragraph beginning on page 56, line 4 with the following rewritten paragraph:

As shown in FIG. 25, the sheet set section 243 includes a third vacuum suction type transfer head 261, head moving device 262, and head elevating device 263. The transfer head 261 includes a wall 261a which has the same size or a larger size as compared with the size of the ~~second~~ third sealing sheet ~~22~~ 23. The wall 261a forms a lower surface of the transfer head 261, and has a flat surface. In the wall 261a, a large number of suction holes 261b are disposed in the whole area, that is, in substantially the same range as that of the ~~second~~ third sealing sheet ~~22~~ 23. The transfer head 261 has a concave portion formed through a thickness direction (not shown in FIG. 25, but a transfer head 311 having a similar constitution is described later and represented by FIG. 31A). The concave portion is disposed to avoid interference with a support chuck 278 described later and upward portions 13au, 14au. The transfer head 261 is connected to a vacuum suction source (not shown) via a flexible tube which does not inhibit the head 261 from moving.
